Summary

I'm a third-year student at Bina Nusantara University, majoring in Cyber Security. Over the last two years, I've learned a lot through the projects I've completed, both as an individual and in groups. These projects have taught me valuable skills such as effective communication, public speaking, and teamwork in problem-solving.

Some noteworthy projects I've worked on include Software Engineering, where my team and I created a website using HTML, CSS, PHP, and JS. In this project, I primarily focused on frontend development, with some backend coding involved. The second project involved Network Penetration Testing, where we successfully solved a machine on Hack The Box. The third project was Mobile Penetration Testing, where we searched for vulnerabilities and successfully exploited them through static and dynamic testing.

Additionally, I've been involved in other projects, including entrepreneurial ideation projects and various social projects. Currently, I am engaged in several ongoing projects, including Research, Secure Programming, and HumanComputer Interaction projects. I have also registered with Bina Nusantara's IT division, where I am currently undergoing training and elimination process.

I'm eagerly looking forward to the opportunity to apply the skills and knowledge I've acquired in the field of Cyber Security through internship.

Education

BINUS University

Undergraduate, Cyber Security

2021 - 2025

SMA Pangudi Luhur

Senior Highschool, Science

Jul 2018 - Apr 2021

Skills

MySQL • English as a Second Language (ESL) • Teamwork • Problem Solving • Canva • Threat Modeling • Cybersecurity • Kali Linux • Network Penetration Testing • Mobile Penetration Testing
